ck-market forecasts, job-interview simulation, automated expe rization, AI music — and GrowNet, an active research project to new AI architecture

Nektarios Kalogridis — Solo Founder, NektronAI — Products live. Active research.

DeepTrading.ai — live since 2021

Forecasts stock direction & magnitude for 250 tickers; V2 adds explainable outputs.

• New pipeline compiles recent market/news context and produces verifiable forecasts.

• GPT-based backtests now match my LSTM's directional accuracy; replacing the legacy stack.

• Built for real users: practical, transparent, and fast to iterate.

Interview Helper AI — Practice Mode + Assist Mode

Practice Mode: mock interview with adjustable difficulty, interviewer voice style (serious/cheerful) and voice gender (male/female), with AI grading on spoken answers. Assist Mode: on-demand answers from your screen (screenshots) or microphone, shown in a docked overlay; a hotkey can type answers as keystrokes.

• Supports multiple-choice and coding; keystroke pasting works well with Monaco/LeetCode.

• Indentation handling options and randomized delays mimic natural typing.

• Flexible capture: watched folder, hotkey screenshot, or periodic capture; optional system audio input.

AI Auto Expense Categorizer

Turns messy, multi-institution finance data into clean, accountant-ready records—automatically. Hybrid engine (deterministic rules + AI model) outputs categories/tax tags with confidence and rationale; real-time SMS clarifications learn new rules.

• Ingests banks/cards/PayPal/CSVs; vendor normalization, de-dupe, anomaly/duplicate detection.

• Line-item extraction from receipts/invoices; custom taxonomy learning; full audit trail.

• PII-safe local or Docker deployment; hooks for Plaid/QuickBooks/Stripe.

Artificia — AI pop singer / creative lab

Production pipeline for songs and visuals, drawing on my composer/producer background.

• Co-creates lyrics, melody, arrangement, and visuals with audience input loops.

• Blends human taste with generative tools for studio-quality assets.

• Outputs performance-ready tracks and visuals for publishing.

Pipeline Services — open-source execution pipelines for Java

Structured, reusable pipelines composed of labeled, typed steps; construct programmatically or via JSON.

• Built-in short-circuiting, error policies, metrics, and structured logging at pipeline & per-step levels.

• Step t   al methods, remote adapters   mpt-driven code generators   assic code with AI compon
